

RELOADING PROCEDURES FOR THE 40mm RELOAD KITS (4557)

- 1) Place the black rotating band on clean hard surface, with the large open end down.
- 2) Place new primed plastic shell case with primer facing up over rotating band.
- 3) Firmly push shell case down over rotating band until it pops into place. A slight snap should be heard.
- 4) Take the sponge nose and insert it into the rotating band by pushing down with a twisting motion until seated.
- 5) The round is now ready to be used in “training” scenarios.

NOTE: TAKE CARE NOT TO APPLY PRESSURE TO PRIMER WHEN ASSEMBLING PRIMED SHELL CASE AND ROTATING BAND.
